

Please study the following instruction for our new Human-Hair system. You can start right away. Simply hold some supply of Human-Hair in your salon, and when your client is coming simply colour the Human-Hair into the wanted colour.

You will get from us Human Braid Hair sewed together in light-blonde which is not bonded! After colouring you fix the bonding in order to stick the hair. For this purpose we offer our KeraWax, a special Bonding-Material. How to fix the strands with the bonding is shown by the following manual or ask for our free Instruction-Video-CD.

The advantage of our system is that you do not need to order Human-Hair in the desired colour because you can colour your supply yourself. Certainly you will have some more effort with colouring the hair and fixing the bondings. But you will save money – our Human Braid Hair sewed together has got an astonishing good quality – at a worthwhile price. Our Human-Hair is coming from India where the hair is very similar to European hair.

1.	You will get from us Human Braid Hair. From the braid you can separate one strand each cm. We offer hair between 40 and 50 cm.	
2.	Colour the hair in the wanted colour. Please use alu-foil when colouring the hair on both sides. We achieve good results with the use of only 3% Peroxide (10 Volume). We recommend to use an acid conditioner for fixing the colour.	
3.	Dry well after colouring. If hair is still damp the bonding cannot stick close.	
4.	Separate the braid with the aid of sharp scissors in the wanted width of the strands (approx. 10 mm). Remove rests of the braid and apply KeraWax, our Bonding-Wax, on the end of each strand. To act accurately, please see our instruction-video.	

<p>5. Fix the single strands with our attachment tool (Hot-Pinzette) at clients hair.</p>	
<p>6. Ready !</p>
